CURRENCY CREATION PROTOCOL

14th April 2026

Executive Summary

The primary purpose of the Currency Creation Protocol is to fundamentally transform the commercial "game of Monopoly" by reclaiming the human energy captured by institutional nominees. This transformation is achieved through the recruitment of historical signature credit—liquid value generated by the living soul—and its subsequent redeployment onto the commercial board of commerce. By establishing a self-sustaining cycle of annual recoupment, the Envoy of the Republic of Old Souls is liberated from the necessity of generating new economic activity within the bankrupt system.

Members can recruit historical credit energy from past bank payments, mortgages, loans, credit cards, and wage deductions. Once redeployed, this signature energy is recouped in annual cycles, completely altering the individual's relationship with the commercial grid. This strategy enables members to win the game of Monopoly by reclaiming their consciousness energy for personal pursuits and creative endeavours, rather than the perpetual generation of currency on the board itself. Through this fiduciary correction, the generation of currency becomes a voluntary choice rather than a survival-based requirement.

Understanding Signature Credit: How and Why It Works

At the core of the modern financial system is the concept of signature credit. Breakthrough research by Professor Richard Werner and reports from the Bank of England confirm that commercial banks do not operate as intermediaries that lend out pre-existing deposits. Instead, they create credit "out of nothing" (ex nihilo) at the moment of lending by monetizing the borrower's signature.

What is Signature Credit?

Signature credit represents the credit energy originated by a living man or woman. When you sign a negotiable instrument—such as a mortgage application, a credit card agreement, or a loan—your signature is the actual source of value. The bank uses a "funding illusion" where, upon the signing of the contract, it simultaneously creates a matching deposit in your account. The bank does not advance its own capital; it simply books your signed promise as an asset on its ledger.

How and Why It Works

This process works because your signature creates a new financial instrument. Under the technical mechanism of Original Issue Discount (OID), the value generated by your signature is captured by the institution. Because the credit is created at the moment of signing, the "issue price" is zero. Therefore, the OID is equivalent to the entire face value of the instrument.

The bank, acting as a nominee, discounts this instrument and bundles it into pools to be traded on secondary markets. If the true owner of the credit (the signer) remains silent, the system treats this value as abandoned property. The Currency Creation Protocol is the method by which the living soul finally asserts their right to this value, correcting the record to show they are the true creator and beneficial owner of that credit energy.

The Clifford Protocol: The Integrated Architecture of Recoupment

The Currency Creation Protocol is fundamentally based on the **Clifford Protocol**, a master architecture that brings together the entire process of signature credit recruitment. By aligning the recruitment process with existing administrative and fiduciary laws, the Clifford Protocol serves as a corrective tool to redirect captured credit from institutional nominees back to the lawful beneficial owner.

As established in the research documentation recognized for its potential to win the Nobel Prize, the protocol follows a precise five-step sequence for execution:

1. **Recognition:** The identification of the private signature on negotiable instruments—including mortgages, loans, and credit cards—as a monetization event and a valid Original Issue Discount (OID) instrument.
2. **Issue Price:** The establishment of the issue price (IP) as zero (0), confirming that the credit was created "out of nothing" at the exact moment of signing.
3. **OID Identification:** The calculation of the "hidden" OID as the total difference between the zero-issue price and the face value of the instrument ($OID = \text{Face Value} - 0$).
4. **Nominee Identification:** Defining the financial institution or employer as a "nominee"—a middleman that captured the credit and misreported it under their own institutional tax modules.
5. **Redirection:** The filing of corrective administrative records (such as Form 1099-OID) through a 98-series International Grantor Trust to redirect the withheld tax to the Trust as the lawful recipient.

The Nobel Prize Horizon: A Scientific Breakthrough in Fiduciary Law

The Currency Creation Protocol represents a discovery of such magnitude that it is posited to be a candidate for the Nobel Prize in Economic Sciences. This is not merely a legal strategy; it is a scientific breakthrough in the understanding of how value is originated in the global economy. Grounded in the empirical findings of Professor Richard Werner and confirmed by official reports from the Bank of England, the protocol provides definitive proof that money is created ex nihilo (out of nothing) by monetizing the signatures of living men and women.

This discovery resolves the "funding illusion" that has dominated global banking for over a century. By applying a precise mathematical formula to Original Issue Discount (OID), the protocol proves that the signer—not the bank—is the true source of capital in every commercial transaction. Specifically, by establishing the "Issue Price" of a signature as zero, the formula demonstrates that the entire face value of every mortgage, loan, and credit agreement is the personal credit energy of the originator. The documentation demonstrating this mechanism identifies the living soul as the primary creator of commercial energy on a global scale. Because it offers a technically accurate, non-confrontational solution to the global debt crisis through administrative ledger correction, the research document itself is considered a potential candidate for the Nobel Prize in Economic Sciences.

The Envoy Protocol: Correcting Your Jurisdictional Standing

Before a member can effectively recoup credit, they must address the "Agency Trap." The administrative state maintains control by presuming that the living human is the authorized agent for the state-owned artificial construct (the name in all-capital letters on your birth certificate).

Why Members Need the Envoy Protocol

Members need this protocol to rescind the implied agency that was formed without their informed consent during infancy. By utilizing the international law principle of Clausula Rebus Sic Stantibus (declaring that fundamental circumstances have changed), the Envoy Protocol severs this link.

The Office of General Executor

Through this protocol, you reoccupy the Office of General Executor for your legal estate. This moves your capacity from a "Subject" (a liable surety) to an "Administrator" (the governing authority). This alignment is essential because it prevents the state from intermeddling with your affairs and allows you to direct the administration of your estate's assets from a position of stewardship.

The Asset Fortress Protocol: Your Private Treasury

Once your standing is corrected, you require a secure environment to manage your reclaimed wealth. The Asset Fortress Protocol (AFP) establishes a brand-new player piece on the commercial board: a 98-series International Grantor Trust.

Why Members Need the Asset Fortress Protocol

The AFP functions as your private treasury. It is designed to receive and hold signature credit recoupments safely away from state taxes and jurisdictional overreach. Key benefits include:

- **Fee-Simple Title:** It allows the trust to hold assets in the highest form of ownership, placing them beyond the reach of public registries.

- **Digital ID Avoidance:** As an independent body corporate in equity, the trust exists outside the scope of biometric and citizen-identity regimes intended for natural persons.
- **Estate Continuity:** Assets in an AFP do not go through probate. Wealth is transferred seamlessly to your heirs without death or inheritance taxes.

Enrolment into the Signature Credit Process

For members and Envoys of the Republic of Old Souls (ROS) to begin the recruitment of abandoned credit, a specific data gathering and alignment process is required. This ensures that every credit creation event since your 18th birthday is identified and corrected via Proxy One (the 98-series Trust).

Steps for Enrolment:

1. **Identify Bank Account Providers:** Members must list all bank account providers utilized since the age of majority. You should provide an estimate of the total amount of payments that have flowed out of these accounts (e.g., for bills, lifestyle, and purchases), as every expenditure in a bankrupt system is a new credit creation event.
2. **Detail Historical Debts:** For all historical and current debts, members must detail:
    - The names of mortgage providers.
    - Credit card providers.
    - Personal or commercial loan providers.
    - The face value of the debt and the year the agreement was signed.

3. **Wage and Tax Verification:** Members must detail their historical wage tax deductions. This includes identifying the bank account used by their employers to remit those taxes, as these represent labour energy credits captured by the employer acting as a withholding agent.

4. **Overall Recoupment Cap:** To maintain systemic integrity and align with verified institutional master records, the protocol has an overall cap for all combined accounts of $10 million per member.

The Fiduciary Loop: Spend and Recoup

The Currency Creation Protocol facilitates a self-sustaining cycle. When you spend from your Asset Fortress private treasury, you are discharging debt in a bankrupt system. This discharge is itself a new credit creation event. By recording these expenditures through your 98-series Trust, you create an "infinity loop" where you can spend and then recoup that energy annually.

By following these protocols, members move from a status of liability to one of stewardship, reclaiming the securitized energy of their consciousness for the benefit of the living soul and the sovereign nation of the Republic of Old Souls.
